MAIN FEATURES

Introduction

This publication is the first consolidated statistical profile of Tasmania's North-West Coast. As 76.9 per cent of the population in the North-West is contained along the coastal strip between Wynyard and Latrobe, this publication reflects that focus and is confined to areas contained within the Burnie-Devonport Statistical Subdivision.

The main features which follow relate to the component Statistical Local Areas (SLAs) of the Burnie-Devonport Statistical Subdivision and to the suburbs of Burnie and Devonport. For a definition of these areas users are referred to Section 5 of the Explanatory Notes and to the map of the Subdivision on page 23.

Population Growth

The 1986 Population Census counted 74 584 persons in the Burnie-Devonport Statistical Subdivision, 17.1 per cent of the total number of persons counted in Tasmania. The population of the Burnie-Devonport Statistical Subdivision has grown by 5.2 per cent in the five years since 1981, a stronger growth rate than the 4.2 per cent for the total State.

Of the major urban centres in the Burnie-Devonport region, Latrobe – Pt A Statistical Local Area has grown by 11.9 per cent from 4 475 persons in 1981 to 5 008 persons in 1986. Ulverstone – Pt A has grown by 8.0 per cent to 12 015 persons while the number of persons counted in Devonport (C) now stands at 24 417 persons, a rise of 5.4 per cent.

The other three areas, Burnie – Pt A (18 479 persons), Penguin – Pt A (4 270 persons) and Wynyard – Pt A (10 395 persons) have grown by 3.1 per cent, 3.0 per cent and 3.1 per cent respectively in the last five years.

Age Profile

The median age for the Burnie-Devonport Statistical Subdivision was 30.1 years, slightly lower than that for all Tasmanians (30.4 years). There was little variation in median age across the SLAs, with Burnie – Pt A at 28.8 years the lowest and Latrobe – Pt A the highest with a median age of 31.3 years.

Among the suburbs of Burnie, Central Burnie had the highest median age at 42.1 years — almost 20 per cent of persons were aged 65 years and over, while only 11.2 per cent were aged less than 15 years. The median age of persons in Shorewell was only 18.8 years on Census night. 41.5 per cent of Shorewell's population were aged less than 15 years while only 1.8 per cent were 65 years and over. The suburb of Wivenhoe had 29.5 per cent of its population of 380 persons aged less than 15 years and a further 14.5 per cent aged 65 years or more.

Pardoe Downs-Rannoch, of all the suburbs of Devonport, had the youngest population, with a median age of 20.9 years. 37.1 per cent of its population was less than 15 years of age. The suburb of Bluff had a population with a median age of 41.1 years, the oldest for all of the Devonport suburbs. The median age of all females in Bluff was 48.4 years while for males it was 34.6 years.

Distribution by Sex

There were 94.6 males for every 100 females in the Burnie-Devonport Statistical Subdivision on Census night 1986. Wynyard – Pt A had a masculinity ratio of 98.8 while in Ulverstone – Pt A there were 91.7 males for every 100 females.

In Burnie, the suburbs of Wivenhoe (115.9) and Ocean Vista (107.2) had high masculinity ratios while South Burnie-Emu Heights (88.1) and Shorewell (88.2) had relatively low male to female ratios.

In the Devonport suburb of Bluff, only 76.4 males per 100 females were counted, the lowest ratio of all Devonport suburbs. The highest masculinity ratio in Devonport was found in Quoiba-Spreyton with 102.9 males per 100 females.

Birthplace

92.0 per cent of persons in the Burnie-Devonport Statistical Subdivision were born in Australia. Of the 6 627 persons born overseas, 3 517 (53.1 per cent) were born in the UK and Eire. All of the major urban centres in the Burnie-Devonport region showed very comparable proportions of overseas-born.

Among the suburbs of Burnie, Central Burnie (12.7 per cent) and Parklands (11.7 per cent) had the highest proportions of overseas-born and Shorewell (3.9 per cent) and Wivenhoe (5.3 per cent) had the lowest proportions.

In Devonport, Pardoe Downs-Rannoch and Quoiba-Spreyton had the lowest proportion of overseas-born with 4.6 per cent and 4.8 per cent respectively. Bluff with 13 per cent and Ambleside with 12 per cent had the highest percentage of persons born overseas.

Religion

Of all those who responded to the religion question in the 1986 Census in the Burnie–Devonport Statistical Subdivision 34.5 per cent were Anglican, 19.6 per cent were Catholic, 15.1 per cent supported the Uniting Church while 12.5 per cent reported that they had no religion. Latrobe – Pt A had relatively high proportions of both Anglicans (37.4 per cent) and Catholics (21.6 per cent) while Penguin – Pt A had a relatively large proportion of followers of the Uniting Church (20.6 per cent) and a low proportion of Catholics (14.1 per cent).

Labour Force Participation

74.0 per cent of males and 42.4 per cent of females aged 15 years and over in the Burnie–Devonport Statistical Subdivision were participating in the labour force according to Census 86. The lowest participation rates were measured in Ulverstone – Pt A with 71.5 per cent of males and 40.8 per cent of females participating in the labour force. The highest male participation rate was found in Burnie – Pt A with 76.3 per cent while for females Devonport (C) had 43.9 per cent of those aged 15 and over participating.

Of the suburbs of Burnie high proportions of males aged 15 years and over in the labour force were measured in Brooklyn–Romaine (84.8 per cent) and Havenview (84.7 per cent). The lowest male participation rates were measured in Wivenhoe (64.8 per cent) and Central Burnie (70.7 per cent). Wivenhoe (36.6 per cent) and Shorewell (33.3 per cent) both had low female participation rates while high rates of female participation were found in Park Grove (49.4 per cent) and Havenview (48.1 per cent).

In Devonport, the suburb of Ambleside had the highest rate of labour force participation for both males (82.7 per cent) and females (55.1 per cent). High female participation was also measured in Miandetta with a rate of 52.7 per cent. The suburb of Bluff recorded the lowest participation rates for both males (58.4 per cent) and females (34.9 per cent).

Unemployment

Census 86 measured the unemployment rate for the Burnie–Devonport Statistical Subdivision to be 11.7 per cent. The rate in Burnie – Pt A was 13.7 per cent while in Ulverstone – Pt A it was 10.6 per cent. Unemployment rates for males, females and for youth were all relatively higher in Burnie than in other SLAs of the region.

Among the suburbs of Burnie the unemployment rate in Shorewell was 28.5 per cent (for males it was 25.5 per cent and for females 34.5 per cent). Ocean Vista and Wivenhoe, at 17.4 per cent each, also had high unemployment rates. Low rates of unemployment were measured in Parklands (5.6 per cent) and Park Grove (6.5 per cent). South Burnie–Emu Heights and Hillcrest both had extremely high youth unemployment rates. The rates for 15–19 year olds were 46.0 per cent and 43.6 per cent respectively.

In Devonport the highest unemployment rate was measured in Pardoe Downs–Rannoch with 24.2 per cent of the labour force looking for work. Low rates were recorded in Ambleside (4.5 per cent) and Miandetta (5.9 per cent).

Family Composition

Census 86 counted 20 557 families in the Burnie–Devonport Statistical Subdivision. Of these, 17 653 (85.9 per cent) included a couple, while 1 793 (8.7 per cent) were single-parent families. Of the SLAs in the region, Burnie – Pt A had relatively fewer families comprising a couple (84.5 per cent) and a relatively higher proportion of single-parent families (10.3 per cent). Penguin – Pt A had only 6.0 per cent of all families which included a single parent and 88.7 per cent which included a couple.

In Burnie 32.1 per cent of all families in Shorewell were single-parent families while 14.6 per cent of Hillcrest families included a single parent. Only 3.0 per cent and 3.5 per cent of all families in Ocean Vista and Parklands, respectively, were single-parent families. The suburb of Shorewell had the highest proportion of families with dependent children (87.5 per cent of all families).

In Devonport the highest proportion of single-parent families was counted in Pardoe Downs–Rannoch with 23.9 per cent. Only 2.5 per cent of all families in Quoiba–Spreyton and 2.8 per cent in Ambleside were single-parent families. Pardoe Downs–Rannoch was also the suburb with the highest proportion of families with dependent children (71.0 per cent of all families).

Family Income

The median family gross annual income in the Burnie–Devonport Statistical Subdivision in June 1986 was \$20 866. This was lower than the figure for all Tasmanian families of \$22 161 per annum.

Suburbs of Burnie with the highest median family incomes were Park Grove (\$28 508) and Parklands (\$27 201). The suburb of Shorewell had the lowest median family income of \$13 428. Wivenhoe with low labour force participation also had a relatively low median family income (\$18 001).

In Devonport, Ambleside had the highest median family income with \$29 258. Miandetta (\$25 129) and North Devonport (\$24 918) also had families with higher incomes. Low median family incomes were recorded in Pardoe Downs–Rannoch (\$16 160) and Bluff (\$17 668).

Occupancy of Private Dwellings

The 1986 Census counted an average of 3.02 persons for every occupied private dwelling in the Burnie–Devonport Statistical Subdivision. This occupancy rate was evenly spread across each of the SLAs in the region. 73.9 per cent of all occupied private dwellings were owned or being purchased in June 1986. This was slightly higher than the ownership rate for all Tasmania of 71.9 per cent.

In Burnie the suburb of Shorewell was quite different to other suburbs in its occupancy of private dwellings with an occupancy rate of 4.0 persons for every occupied private dwelling. In addition, only 26.2 per cent of its private dwellings were owned or being purchased; 71.5 per cent of dwellings in Shorewell were being rented from the State Housing Authority. The median weekly rental payment in Shorewell was \$41.11, the lowest of all Burnie suburbs.

Central Burnie had the lowest occupancy rate in Burnie of 2.25 persons per private dwelling. It also had a high proportion of its population living in flats and medium density housing (with a large private rental market) with only 65.5 per cent of its population living in a separate house.

The suburb of Parklands also had clearly discernible housing patterns. 94.7 per cent of its residents lived in a separate house, 86.9 per cent of its private dwellings (mostly houses) were owned or being purchased, it had the highest median weekly rent of \$72.50 and the highest median monthly mortgage repayments of all Burnie suburbs (\$317.19).

Similar patterns were evident in Devonport. In the suburb of Ambleside 99.5 per cent of all occupied private dwellings were separate houses of which 92.8 per cent were owned or being purchased. Costs for housing were the highest in Ambleside with median weekly rent being \$90.00 and median monthly mortgage repayments of \$340.91.

The suburb of Bluff was characterised by a relatively low occupancy rate (2.38 persons per dwelling), only 65.5 per cent of all occupied dwellings being separate houses (32.0 per cent were medium density housing) and a low proportion (62.5 per cent) of dwellings being owned or purchased (34.2 per cent of dwellings were rented, most of them from private landlords).

A high proportion (52.8 per cent) of all private dwellings in Pardoe Downs–Rannoch were rented from the State Housing Authority. Housing costs were the lowest of all suburbs with median weekly rent of \$46.17 and median monthly mortgage repayments of \$201.09. The occupancy rate for all occupied private dwellings in Pardoe Downs–Rannoch was 4.06 persons.

EXPLANATORY NOTES

1. Introduction

This publication gives details of persons and dwellings in Burnie and Devonport suburbs and other areas along the North-West coast of Tasmania from the Census of Population and Housing conducted on 30 June 1986.

2. Scope and coverage

The 1986 Census of Population and Housing aimed at counting every person who spent census night, 30 June 1986, in Australia, including persons on vessels in or between Australian ports or on board long-distance trains, buses or aircraft. All private dwellings were counted whether occupied or unoccupied. Occupied non-private dwellings such as hospitals, prisons, hotels etc, were also included. People were counted where they were on census night, which may not have been where they usually lived. Visitors to Australia were enumerated regardless of how long ago they had arrived or how long they planned to stay. Australian residents out of the country on census night were excluded from the count.

Diplomatic personnel and their families are out of the scope of the census, as are diplomatic residences.

3. Definitions

Census Count — Place of Enumeration

Persons were counted where they were actually located on census night. Overseas visitors are included and Australians overseas are excluded. No adjustment is made for census underenumeration.

Census Count — Place of Usual Residence

Persons were counted according to their stated place of usual residence. Overseas visitors and Australians overseas are excluded and no adjustment is made for census underenumeration. Statistics on a place of usual residence basis are not included in this publication.

Estimated Resident Population (ERP)

These estimates are formed by adding estimates of Australians overseas, and of the census undercount, to the census count at place of usual residence. The ERP at census date is updated between population censuses. ERP statistics are not included in this publication.

Occupied Private Dwelling: is normally a house, flat, part of a house, or even a room (but can also be a house above shops or offices, a boat, or a tent or caravan if it is standing on its own block of land) occupied by a person or group of persons living and eating together as a domestic unit. It excludes establishments such as hotels, motels, boarding houses and caravans in caravan parks etc.

Unoccupied Private Dwelling: is a structure built specifically for living purposes, which is habitable, but unoccupied at the time of the census. Vacant tents, garages and caravans (if not normally occupied) are excluded.

4. The statistics in this publication are based on the census count at the *place of enumeration*. Population estimates will be released when full Census 86 statistical data for Australia are available later in 1987.

5. North-West Coast Geographic Areas

In describing population centres on Tasmania's North-West Coast in this publication, data are provided for three distinct geographic groupings.

Over three-quarters of the population of the North-West Coast is to be found within the Burnie-Devonport Statistical Subdivision. Broadly, this area extends along the coastal strip between Wynyard and Latrobe. Specifically, the Burnie-Devonport Statistical Subdivision is defined as the Statistical Local Areas (SLAs) of Wynyard – Part A, Burnie – Part A, Penguin – Part A, Ulverstone – Part A, Devonport City and Latrobe – Part A. The map on page 23 shows the respective SLA boundaries and their relationship to legal local government area boundaries.

Secondly, data are provided for Burnie and Devonport suburbs. There are no official Burnie and Devonport suburban boundaries nor, in some instances, official recognition of particular suburbs. In determining suburban boundaries for the purposes of this publication the ABS referred to local government authorities and the Tasmanian Towns Street Atlas published by the Tasmanian Department of Lands, Parks and Wildlife. Suburbs were then defined by combining census collection districts (CDs). A CD is the smallest geographic unit used to classify census data and hence, suburban boundaries to some extent have been governed by CD boundaries. The maps attached to this publication show the boundaries used.

The area containing Burnie and Devonport suburban populations does not correspond exactly with the respective SLAs, Burnie – Pt A and Devonport (C). However, it is reasonable for users to assume that the characteristics of the SLAs are representative of the total Burnie and Devonport suburban areas.

Finally, data are provided for the other areas of significant population within the Burnie-Devonport Statistical Subdivision. The areas included are Forth, Heybridge, Port Sorell, Sulphur Creek and Turners Beach.

6. Data quality

Statistical collections such as the census are subject to a number of sources of error. While some errors (such as deliberate misreporting) defy detection and correction procedures the number of errors in overall census results is expected to be generally insignificant. Information on data quality will be released from late 1987.

Main sources of error in the census are:

- (a) *Underenumeration.* Despite efforts to obtain full coverage of persons and dwellings (other than those associated with overseas diplomatic missions) some undercounting still occurs. A measure of the extent of underenumeration is obtained from a small survey of households undertaken very shortly after the census. While results from this source for the 1986 Census are not yet available undercounting of persons in the 1981 Census was estimated to be 1.9 per cent for Australia as a whole.
- (b) *Partial response.* In those instances where the householder omitted to provide a response to a question a 'not stated' code was allocated; with the exception of non-response to age, sex and marital status, and Statistical Local Area of usual residence. These variables were imputed using other information on the census form, and specially constructed random tables.

- (c) *Respondent error.* Computer editing procedures are used to detect obvious errors made by individuals in completing the form (for example, a six year old male who was married). Such procedures cannot detect all respondent errors and some remain in final output.
- (d) *Processing error.* Errors created during the processing of the census are kept at an acceptable level by means of a quality control system, which involves sample checking at different stages of the coding and keying operations, and taking corrective action where necessary.
- (e) *Introduced random adjustments.* Adjustments are made to table cells to allow the maximum of detailed census data to be released, while protecting the confidentiality of information about individual persons. For this reason, and since possible respondent and processing errors have greatest relative impact on small cells, no reliance should be placed on cells of three or less.

7. Further Information

The ABS has produced a number of information papers which explain all aspects of the conduct, processing and output available from Census 86. Details of standard output products to be released from the census are contained in *Census 86 — Data Release Plans* (2173.0). Details of tabulations are contained in the *Catalogue of 1986 Census Tables* (2175.0). The *1986 Census Dictionary* (2174.0) contains definitions of terms and explains concepts in the collection, processing and output phases of the census.

The ABS released *Characteristics of the Population and Dwellings in Local Government Areas, Tasmania* (2401.6) in August 1987.

Related publications containing a similar range of data to that contained in this publication have been released for Hobart Suburbs (2201.6) and Launceston Suburbs (2202.6).

Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0) available from any ABS office.

8. Symbols and other usages

The following symbols, where used, mean:

..	not applicable
—	nil or randomised to zero
M	males
F	females
P	persons
(C)	City

Discrepancies may occur between sums of the component items and totals due to the introduction of random adjustments of small cells.

TABLE 1. SUMMARY CHARACTERISTICS AT 30 JUNE 1986

Area	Total persons	Median age (years)	Masculinity ratio (males per 100 females)	Percentage born in Australia (%)	Unemployment rate (%)	Median family income (\$)	Occupancy rate (a)	Proportion of dwellings owned or being purchased (%)	Median monthly mortgage payment (\$)	Median weekly rental payment (\$)
